Independent test confirms excellent mobile network quality

An independent test demonstrates that Salt has further improved the quality of its mobile network, providing one of the best networks in the "DACH" region (Germany, Austria and Switzerland). The operator's network was again rated "very good".

On March 4, 2020, the German magazines *PC Magazin* and *PCgo* published the results of a network quality test of nine telecommunication operators in Austria, Germany and Switzerland. With over 3,3 billion measurements in total between August 5, 2019, and January 19, 2020, the crowdsourcing test took in consideration both central locations and rural areas, combining data and voice traffic analysis of 591.400 individual mobile phone customers in total in all three countries (of which 41.500 in Switzerland).

With 917 out of 1'000 points, Salt improved its results year on year, reaching top values in voice and data coverage. Salt was able to again achieve an overall "very good" rating and, making an important contribution to the excellent mobile network quality in Switzerland.

This excellent score is the result of Salt's continuous investment in its network infrastructure. Over the past five years, the company has been focusing on the expansion of the indoor coverage, building multiple new radio sites and upgrading extensively the low frequency band. The expansion of the 1Gb/s sites is well on track and the introduction of the 5G technology in the current year will contribute to further strengthening the network.

Pascal Grieder, CEO at Salt, comments the test results: *"This score demonstrates that we have further improved our network quality and that our customers benefit from one of the best mobile networks in Europe. It also highlights the fact that consumers who want a very good network quality get it at the best price with Salt. This makes us proud and we will strive to ensure that it will remain also true in the future."*

About Salt: Salt is a Swiss telecommunications provider which owns and operates an extensive, high-quality mobile telecommunications network. Thanks to its ultrafast broadband solution called Salt Fiber, Salt provides a unique triple play service, which for the first time in Switzerland takes full advantage of the optical fiber technology by means of symmetrical data transmission rates of up to 10 Gbit/s. Salt Fiber can be combined in a gainful way with Salt's powerful flat rate subscriptions - a revolutionary and straight forward portfolio.

Salt in figures: 1,244,500 postpaid customers (as of 30.09.2019), 103 Salt Stores and 4G coverage of 99% of Switzerland's population.
